Moscow, Russia

Aspiring ML Engineer | Data Scientist

EDUCATION

Bachelor of Software Engineering

Moscow State Technological University STANKIN, Moscow

2022 – 2026 (*expected*)

PROJECTS

Telegram Bot for Accelerating University Information Search

Diploma Project

2025 – 2026

STANKIN

- Developing a Telegram bot that drastically reduces time users spend searching for information about Russian universities
- Implemented web scraping of student reviews from multiple websites and forums
- Integrated AI model for sentiment analysis, rating assignment and database storage

Student Dropout Prediction Model

Course Project

2024

STANKIN

- Built neural network to predict probability of student expulsion
- Generated synthetic dataset with defined rules and ground-truth labels
- Trained model and validated accuracy and reliability

AI-Powered Product Advertisement Text Generator

Personal Project

2023

STANKIN

- Built web service: user inputs key product characteristics in text form (bullet points) → AI instantly generates full compelling advertising text via OpenRouter API
- Users can fully customize prompt, style, tone, length and structure of the generated text
- Created complete automated pipeline for marketing content generation
